Dear Partners,

Application of Lean Management can offer a breakthrough opportunity for Hungarian enterprises to improve their competitiveness. Lean management is not just fashion but also a philosophy and a system based on Toyota best practices, that is applied by numerous enterprises and can give real competitive advantages (flexible customer service, shorter lead time, less inventory costs, continuous waste elimination, higher quality) for those enterprises, who are systematically applying it.

The mission and objective of Kvalikon Plc. From it establishment is to share and implement the effective management methods and best practices in the Hungarian practice.

Considering this goal, we organize the first Lean Forum – Productivity Conference with the involvement of Pannon Automotive Cluster, the German-Hungarian Chamber of Commerce – Training Center, ISO Forum, ITDH.

During the two days of the conference, domestic and international experts present the Lean methods through specific examples and case studies. The conference also gives an opportunity to initiate a fruitful discussion (conversation) among the Lean practitioners.

**P R O G R A M**

**April 9th, 2008.**
